Galileo arrived at Jupiter and was captured into jovian orbit in December 1995. Since then Galileo has been responsible for a multitude of discoveries about the planet, the satellites, the rings, and the magnetosphere. The mission will continue until its completion date in September, 2003. A summary of recent results will be presented as well as the current status of the spacecraft and mission.

This work was carried out at the Jet Propulsion Laboratory, California Institute of Technology, under contract to NASA.
